flowable and packable

unique color matching composite
thanks to chameleon effect

One composit
Many possibilities

Nanofill unique

Universal composite with chameleon-effect

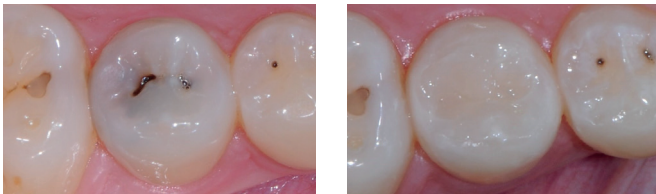

Nanofill unique is a universal nano-hybrid composite for direct and indirect restorations (inlays, onlays, veneers) as well as fillings of cavity class I-V. All classic vita-shades are covered thanks to the chameleon-effect of **Nanofill unique**.

A translucency of 8% allows excellent shade matching of the restoration to the natural tooth shade of the adjacent tooth structure. **Nanofill unique** combines top aesthetics and good handling. It is characterized by easy modeling and optimal adaptation to the cavity walls. Highest polishability gives the finished restoration a perfect gloss. Excellent physical properties guarantee long-lasting restorations.

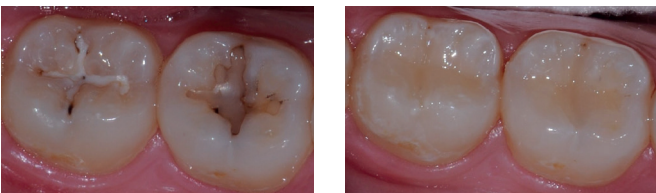

The entire color spectrum is covered with one syringe. Overlapping of rare colours is avoided and stock levels are reduced.

Nanofill unique enables efficient working: elimination of color definition and reduction of errors due to incorrect color selection.

Before/after image: Distal tunnel preparation with Nanofill unique on tooth 45

Before/after image: Occlusal filling with Nanofill unique on tooth 46, 47

Nanofill unique flow

Nanofill unique flow is a light-curing, flowable, highly radiopaque (210% AI) composite of high viscosity and is free of Bis-GMA.

The single-color composite is the universal color solution for a wide range of everyday cases. Thanks to the chameleon effect (transparency 4-5%) and excellent color-matching properties **Nanofill unique flow** ensures natural and high aesthetic restorations.

Nanofill unique flow blends seamlessly into the patient's natural tooth environment, regardless of their tooth color, so restorations simply look naturally beautiful.

Nanofill unique flow can be used for all direct restorations, relinings as well as sealing fissures. Ideal flow characteristics simplify the restoration and adapts nicely to cavity walls. **Nanofill unique flow** is easily to apply without dripping.
